

1. Text description

Text prompt
“a perching bird
with a rounded
body, folded wings,
and clawed feet”

reference code withheld

2. Plan part structure

Structure-planning VLM

Generated Part-Attachment Tree

3. Generate Blender code

VLM: text + validated tree

4. Execute

Run in Blender + render

7. Result

All connections
survive?

yes

Yes: accept editable asset

No: localize and repair

no

6. Check attachments

For every tree edge

surface contact

anchor alignment

5. Change one part and rebuild

Change the parent

body $\times 0.4$

children follow

Change a child

feet $\times 1.6$

stays attached

localized failure returns to the code generator
